Sliding up or down. The figure shows the parabola  $y = x^2$  with a translation 5 units up and a translation 7 units down. A parabola is the graph of a second-degree polynomial, which means that the polynomial has a power of 2 for one exponent. The graph makes a nice, U-shaped curve. Think about a function

Start with  $m=1$  and  $n=1$ , then slowly increase  $n$  so that you can see  $1/2$ ,  $1/3$

# Get Free 1 2 3 To The Zoo A Counting Book The World Of Eric Carle Coloring Book

and  $1/4$ ; Then try  $m=2$  and slide  $n$  up and down to see fractions like  $2/3$  etc; Now try to make the exponent  $-1$ ; Lastly try increasing  $m$ , then reducing  $n$ , then reducing  $m$ , then increasing  $n$ : the curve should go around and around

## **Fractional Exponents**

Any number that is raised to the power of 0 is equal to 1; If a number is raised to a negative power, then it will be rewritten as 1 divided by that number raised to the power, e.g.  $2^{-2} = 1/2^2$ ; If a number is raised to a power expressed as a fraction, then it should be rooted, e.g.  $4^{1/2} = \sqrt{4} = 2$

This works well through a calculator  
such as if you are adding  $\frac{3}{8} + \frac{11}{16}$ .  
 $\frac{3}{8}$  is closest to  $\frac{1}{2}$  and  $\frac{11}{16}$  is less  
than  $\frac{3}{4}$  so it is also closest to  $\frac{1}{2}$ .  
Estimating, we have  $\frac{1}{2} + \frac{1}{2} = 1$ . If we  
really add these terms  $\frac{3}{8} + \frac{11}{16}$ , with  
a common denominator of 16 we have  
 $\frac{6}{16} + \frac{11}{16} = \frac{17}{16} = 1 + \frac{1}{16}$  which  
is really close to our estimate of 1.

A 5/2-way valve can be used as a 3/2-way valve by only using only one inlet and the corresponding outlet port. With two 2/2-way valves the function of a 3/2-way valve can be mimicked. Typical applications. 3/2-Way valves are suitable for several tasks: driving pneumatic actuators, blow-off, pressure release and vacuum applications.

The 1-2-3 Close works through the principle of triples, a curious pattern where three things given together act as a coherent set of three hammer-blows that give a compelling message.

### **1-2-3 Close - Changing minds**

Since  $2/2 = 1$ , cancel out three sets of  $2/2$ . This leaves  $2 \cdot 2$ , or 2 squared. Of course we can take a shortcut and subtract the number of 2's on bottom from the number of 2's on top.
