Animal Behaviour: Psychobiology, Ethology and Evolution ...

Ethology can be contrasted with comparative psychology, which also studies animal behaviour, but construes its study as a branch of psychology. Thus where comparative psychology sees the study of animal behaviour in the context of what is known about human psychology, ethology sees the study of animal behaviour in the context of what is known about animal anatomy and physiology.

Animal ethology | Psychology Wiki | Fandom

Comparative psychology is the branch of psychology concerned with the study of animal behavior. Modern research on animal behavior began with the work of Charles Darwin and Georges Romanes, and the field has grown into a multidisciplinary subject.

Comparative Psychology and Animal Behavior

In ethology, behavior is analyzed using Heinroth's four key standards: The animal must be observed in its natural environment. There should be no interference from the observer. Behavioral traits must be broken down into discrete units called patterns.

Differences Between Comparative Psychology and Ethology ...

Applied Ethology Research Group Focus Areas. Ethology is the study of animal behaviour, its causation and function. Our research group is specifically interested in the study of animal behaviour as it relates to animal welfare and best management practices within agricultural systems.
