VM-FEX gives you the option to bypass the vSwitch embedded on each ESXi host (VEM) for example. With VM-FEX you see the VMs as if they were directly connected to the Parent switch (N7K/5K for example), making the parent switch responsible for the management (cause there is no vSwitch in the middle anymore).

The only reason to implement VM-FEX is to bypass the vswitch scaling (CPU bound) limits on multicast traffic. If you're running a TV station or HFT platform in VMware, then VM-FEX is for you. If you have any other use case VM-FEX is no bueno. If your networking team wants VM level control, they should definitely check out 1kVAWS.
