[2,3] have shown that the cones of uncertainty (COU) [4,5,6] of the major eigenvectors of the diffusion tensors in the brain are mostly elliptical. Analytical approaches have also been developed to characterize the elliptical cone of uncertainty through nonlinear least squares estimations.

The main objective is to analyze different error sources associated with directional survey in far north, in order to calculate the ellipses of uncertainty. Analyzing and rectifying the error sources may decrease the uncertainty and will lead the well path at the desire location, which is the main concern of this thesis.

Error and Ellipses of Uncertainty Analysis in Far North

Introduction In this post, I will show how to draw an error ellipse, a.k.a. confidence ellipse, for 2D normally distributed data. The error ellipse represents an iso-contour of the Gaussian distribution, and allows you to visualize a 2D confidence interval.
