This article is a worked example to beam shear design as per the eurocode 2. This example discusses the method that needs to be followed when designing for shear. The effective depth and width of the beam are 600mm and 300mm respectively. Ultimate design shear force at face of support and at a distance 'd' are 800kN and 700kN respectively.  $f_{ck} = 30\text{N/mm}^2$  and  $f_{yk} = 460\text{N/mm}^2$ .

The design of non slender column according to Eurocode 2 is discussed in this article. This article guides the design procedures to be followed. Factor = 0.85 (concise Eurocode 2, Table 5.1. This may more conservative).  $B = 1.1$  if mechanical reinforcement ratio is unknown.  $\lambda_{lim} > \lambda$  hence, column is not slender.
