Cytology | UnitedVRG

For women age 30 or older, both HPV/Pap cotesting and HPV testing alone are more sensitive than Pap testing alone. Therefore, a woman with a negative HPV test and normal Pap test—or just a negative HPV test—has a very low risk of developing precancerous cervical lesions over the next several years. It is for that reason that, when Pap and HPV cotesting or HPV testing alone are used, the ...

Scrape or brush cytology. Another cytology technique is to gently scrape or brush some cells from the organ or tissue being tested. The best-known cytology test that samples cells this way is the Pap test. A small spatula and/or brush is used to remove cells from the cervix (the lower part of the uterus or womb) for a Pap test.
