Multi Body Simulation And Multi

Multibody simulation (MBS) is a method of numerical simulation in which multibody systems are composed of various rigid or elastic bodies.

Connections between the bodies can be modeled with

analysis products enable engineers to easily simulate and test virtual prototypes of mechanical systems in a fraction of the time and cost required for physical build and test. A multibody dynamic (MBD) system is one that consists of solid bodies, or links, that are connected to each other by joints that restrict their relative motion.

Fig.1 - The multi-link suspension scheme. The model has two mainly rods, the upper and the lower arms, which control the camber angle and the vertical movement (fig.2). They are not the same length: indeed, imposing the upper arm to be shorter, it is possible to have negative camber both for compression and extension of the suspension stroke.
