Konner grounds his discussion of childhood development in evolution, allowing him to cite empirical research across the spectrum of cultures and species. His work concerns brain development, psychosocial development, language, gender differences, relationships in general and relationships between juveniles, kinds of parenting and child care, the role of playing in childhood learning (and teaching), stress, culture and enculturation, and epigenetics.

Evolution of Childhood | Humanum Review

The origin of this evolution lies in the ability of successive generations of parents to regress to the psychic age of their children and work through the anxieties of that age in a better manner the second time they encounter them than they did during their own childhood.
