ensures minimum smoke emissions. The fireplace or wood heater should have a surrounding hearth made of non-combustible materials. The flue, which should be at least 4.6 meters in height from floor level, should be away from any windows or doors.

### **Fireplace & Wood Heater Regulations & Clearances (Aus**

...

The most common misconception we have found amongst most wood heater retailers is that a 3.6m flue kit is “standard” and is enough for the heater to comply. Don’t be caught out! All wood heater installations are regulated by Australian Standard AS/NZS2918 and must comply with Australian Standard AS/NZS 2918:2001. This stipulates that the minimum flue height must be 4.6m above the floor on which the wood heater is located.

stone which we purchased from a local architectural salvage yard.

### **Installing a wood burning stove - a step by step guide ...**

The thimble diameter must be at least 12 inches larger than that of the stovepipe, thus giving at least 6 inches of metal-lined, ventilated clearance. If you do not use a thimble, the clearance must be three times the pipe diameter. A 6 inch pipe would need a 42 inch diameter hole cut through a combustible wall.

### **Recommended Standards for the installation of Woodburning ...**

When installing a new twinwall flue system, if the flue exits the roof within 600mm (horizontally) from the ridge (high point) of the roof then the flue must extend a minimum of 600mm above the ridge. If the flue exits the roof further down then it must extend high enough to achieve 2,3m of horizontal clearance.
